

**VALWOOD**

*GO BEYOND*

**Second Grade Math Curriculum**

---

## 2<sup>nd</sup> Grade Math Overview

Course Description		Topics at a Glance
<p>In second grade instructional time will focus on four critical areas: (1) extending understanding of base ten notation to 1,000; (2) building fluency with addition and subtraction; (3) using standard units of measure of length; and (4) describing and analyzing shapes.</p>		<ul style="list-style-type: none"> <li>● Place value to 1000</li> <li>● Addition and subtraction                             <ul style="list-style-type: none"> <li>○ Mentally add and subtract within 20</li> <li>○ Fluently add and subtract within 100</li> <li>○ Use models to add and subtract within 1000</li> </ul> </li> <li>● Money problems</li> <li>● Time to 5 minutes</li> <li>● Addition and subtraction fluency to 20</li> <li>● Attributes of shapes</li> <li>● Partitioning circles and rectangles; equal shares and fractions</li> <li>● Measure and estimate length</li> <li>● Rectangular arrays</li> <li>● Create and interpret simple graphs</li> </ul>
Assessments		Standards for Mathematical Practice
<ul style="list-style-type: none"> <li>● Assessment tasks from adopted instructional materials</li> <li>● Teacher made tests, quizzes, worksheets and projects</li> <li>● Teacher observations</li> </ul>		<ol style="list-style-type: none"> <li>1. Make sense of problems and persevere in solving them.</li> <li>2. Reason abstractly and quantitatively.</li> <li>3. Construct viable arguments and critique the reasoning of others.</li> <li>4. Model with mathematics.</li> <li>5. Use appropriate tools strategically.</li> <li>6. Attend to precision.</li> <li>7. Look for and make use of structure.</li> <li>8. Look for and express regularity in repeated reasoning.</li> </ol>
Grade Level Expectations		
Standard	Big Ideas for Second Grade	
1. Number Sense, properties, and operations	<ol style="list-style-type: none"> <li>1. The whole number system describes place value relationships through 1,000 and forms the foundation for efficient algorithms</li> <li>2. Formulate, represent, and use strategies to add and subtract within 100 with flexibility, accuracy, and efficiency</li> </ol>	
2. Patterns, Functions, & Algebraic Structures	<ol style="list-style-type: none"> <li>1. Expectations for this standard are integrated into the other standards at this grade level.</li> </ol>	
3. Data Analysis, Statistics, & Probability	<ol style="list-style-type: none"> <li>1. Visual displays of data can be constructed in a variety of formats to solve problems</li> </ol>	
4. Shape, Dimension, & Geometric Relationships	<ol style="list-style-type: none"> <li>1. Shapes can be described by their attributes and used to represent part/whole relationships</li> <li>2. Some attributes of objects are measurable and can be quantified using different tool</li> </ol>	

## 1. Number Sense, Properties, and Operations

Number sense provides students with a firm foundation in mathematics. Students build a deep understanding of quantity, ways of representing numbers, relationships among numbers, and number systems. Students learn that numbers are governed by properties, and understanding these properties leads to fluency with operations.

### Valwood Graduates

The Valwood graduate competencies are the preschool through twelfth-grade concepts and skills that all graduates will be able to demonstrate.

#### **Valwood Graduate Competencies in the Number Sense, Properties, and Operations Standard are:**

- Understand the structure and properties of our number system. At their most basic level numbers are abstract symbols that represent real-world quantities
- Understand quantity through estimation, precision, order of magnitude, and comparison. The reasonableness of answers relies on the ability to judge appropriateness, compare, estimate, and analyze error
- Are fluent with basic numerical and symbolic facts and algorithms, and are able to select and use appropriate (mental math, paper and pencil, and technology) methods based on an understanding of their efficiency, precision, and transparency
- Make both relative (multiplicative) and absolute (arithmetic) comparisons between quantities. Multiplicative thinking underlies proportional reasoning
- Understand that equivalence is a foundation of mathematics represented in numbers, shapes, measures, expressions, and equations
- Apply transformation to numbers, shapes, functional representations, and data

<b>Content Area: Mathematics - Second Grade</b>	
<b>Standard: 1. Number Sense, Properties, and Operations</b>	
<b>Valwood Graduates:</b> Understand the structure and properties of our number system. At their most basic level numbers are abstract symbols that represent real-world quantities.	
<b>GRADE LEVEL EXPECTATION</b> <b>Concepts and skills students master:</b> 1. The whole number system describes place value relationships through 1,000 and forms the foundation for efficient algorithms.	
<b>Evidence Outcomes</b>	<b>21<sup>st</sup> Century Skills and Readiness Competencies</b>
<p><b>Students can:</b></p> <p>a. Use place value to read, write, count, compare, and represent numbers.</p> <p>i. Represent the digits of a three-digit number as hundreds, tens, and ones.</p> <p>ii. Count within 1000.</p> <p>iii. Skip-count by 5s, 10s, and 100s.</p> <p>iv. Read and write numbers to 1000 using base-ten numerals, number names, and expanded form</p> <p>v. Compare two three-digit numbers based on meanings of the hundreds, tens, and ones digits, using <math>&gt;</math>, <math>=</math>, and <math>&lt;</math> symbols to record the results of comparisons.</p> <p>b. Use place value understanding and properties of operations to add and subtract.</p> <p>i. Fluently add and subtract within 100 using strategies based on place value, properties of operations, and/or the relationship between addition and subtraction.</p> <p>ii. Add up to four two-digit numbers using strategies based on place value and properties of operations.</p> <p>iii. Add and subtract within 1000, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method.</p> <p>iv. Mentally add 10 or 100 to a given number 100–900, and mentally subtract 10 or 100 from a given number 100–900.</p> <p>v. Explain why addition and subtraction strategies work, using place value and the properties of operations.</p>	<p><b>Inquiry Questions:</b></p> <ol style="list-style-type: none"> <li>How big is 1,000?</li> <li>How does the position of a digit in a number affect its value?</li> </ol>
	<p><b>Relevance and Application:</b></p> <ol style="list-style-type: none"> <li>The ability to read and write numbers allows communication about quantities such as the cost of items, number of students in a school, or number of people in a theatre.</li> <li>Place value allows people to represent large quantities. For example, 725 can be thought of as <math>700 + 20 + 5</math>.</li> </ol>
	<p><b>Nature of Discipline:</b></p> <ol style="list-style-type: none"> <li>Mathematicians use place value to represent many numbers with only ten digits.</li> <li>Mathematicians construct viable arguments and critique the reasoning of others.</li> <li>Mathematicians look for and make use of structure.</li> <li>Mathematicians look for and express regularity in repeated reasoning.</li> </ol>

<b>Content Area: Mathematics - Second Grade</b>	
<b>Standard: 1. Number Sense, Properties, and Operations</b>	
<b>Valwood Graduates:</b> Are fluent with basic numerical and symbolic facts and algorithms, and are able to select and use appropriate (mental math, paper and pencil, and technology) methods based on an understanding of their efficiency, precision, and transparency.	
<b>GRADE LEVEL EXPECTATION</b> <b>Concepts and skills students master:</b> 2. Formulate, represent, and use strategies to add and subtract within 100 with flexibility, accuracy, and efficiency.	
<b>Evidence Outcomes</b>	<b>21<sup>st</sup> Century Skills and Readiness Competencies</b>
<b>Students can:</b> <ol style="list-style-type: none"> <li>a. Represent and solve problems involving addition and subtraction. <ol style="list-style-type: none"> <li>i. Use addition and subtraction within 100 to solve one- and two-step word problems involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions.</li> <li>ii. Apply addition and subtraction concepts to financial decision-making</li> </ol> </li> <li>b. Fluently add and subtract within 20 using mental strategies.</li> <li>c. Know from memory all sums of two one-digit numbers.</li> <li>d. Use equal groups of objects to gain foundations for multiplication. <ol style="list-style-type: none"> <li>i. Determine whether a group of objects (up to 20) has an odd or even number of members.</li> <li>ii. Write an equation to express an even number as a sum of two equal addends.</li> <li>iii. Use addition to find the total number of objects arranged in rectangular arrays with up to 5 rows and up to 5 columns and write an equation to express the total as a sum of equal addends.</li> </ol> </li> </ol>	<b>Inquiry Questions:</b> <ol style="list-style-type: none"> <li>1. What are the ways numbers can be broken apart and put back together?</li> <li>2. What could be a result of not using pennies (taking them out of circulation)?</li> </ol>
	<b>Relevance and Application:</b> <ol style="list-style-type: none"> <li>1. Addition is used to find the total number of objects such as total number of animals in a zoo, total number of students in first and second grade.</li> <li>2. Subtraction is used to solve problems such as how many objects are left in a set after taking some away, or how much longer one line is than another.</li> <li>3. The understanding of the value of a collection of coins helps to determine how many coins are used for a purchase or checking that the amount of change is correct.</li> </ol>
	<b>Nature of Discipline:</b> <ol style="list-style-type: none"> <li>1. Mathematicians use visual models to understand addition and subtraction.</li> <li>2. Mathematicians make sense of problems and persevere in solving them.</li> <li>3. Mathematicians reason abstractly and quantitatively.</li> <li>4. Mathematicians look for and express regularity in repeated reasoning.</li> </ol>

## 2. Patterns, Functions, and Algebraic Structures

Pattern sense gives students a lens with which to understand trends and commonalities. Being a student of mathematics involves recognizing and representing mathematical relationships and analyzing change. Students learn that the structures of algebra allow complex ideas to be expressed succinctly.

### Valwood Graduates

The Valwood graduate competencies are the preschool through twelfth-grade concepts and skills that all students who complete a Valwood education must have to ensure success in a postsecondary and workforce setting.

#### Valwood Competencies in the 2. Patterns, Functions, and Algebraic Structures Standard are:

- Are fluent with basic numerical and symbolic facts and algorithms, and are able to select and use appropriate (mental math, paper and pencil, and technology) methods based on an understanding of their efficiency, precision, and transparency
- Understand that equivalence is a foundation of mathematics represented in numbers, shapes, measures, expressions, and equations
- Make sound predictions and generalizations based on patterns and relationships that arise from numbers, shapes, symbols, and data
- Make claims about relationships among numbers, shapes, symbols, and data and defend those claims by relying on the properties that are the structure of mathematics
- Use critical thinking to recognize problematic aspects of situations, create mathematical models, and present and defend solutions

**\* Expectations for this standard are integrated into the other standards at preschool through third grade.**

### **3. Data Analysis, Statistics, and Probability**

Data and probability sense provides students with tools to understand information and uncertainty. Students ask questions and gather and use data to answer them. Students use a variety of data analysis and statistics strategies to analyze, develop and evaluate inferences based on data. Probability provides the foundation for collecting, describing, and interpreting data.

#### **Valwood Graduates**

The Valwood graduate competencies are the preschool through twelfth-grade concepts and skills that all students who complete at Valwood education must master to ensure their success in a postsecondary and workforce setting.

#### **Valwood Graduate Competencies in the 3. Data Analysis, Statistics, and Probability Standard are:**

- Recognize and make sense of the many ways that variability, chance, and randomness appear in a variety of contexts
- Solve problems and make decisions that depend on understanding, explaining, and quantifying the variability in data
- Communicate effective logical arguments using mathematical justification and proof. Mathematical argumentation involves making and testing conjectures, drawing valid conclusions, and justifying thinking
- Use critical thinking to recognize problematic aspects of situations, create mathematical models, and present and defend solutions

<b>Content Area: Mathematics - Second Grade</b>	
<b>Standard: 3. Data Analysis, Statistics, and Probability</b>	
<b>Valwood Graduates:</b> Solve problems and make decisions that depend on understanding, explaining, and quantifying the variability in data.	
<b>GRADE LEVEL EXPECTATION</b>	
<b>Concepts and skills students master:</b> 1. Visual displays of data can be constructed in a variety of formats to solve problems.	
<b>Evidence Outcomes</b>	<b>21<sup>st</sup> Century Skills and Readiness Competencies</b>
<b>Students can:</b> <ul style="list-style-type: none"> <li>a. Represent and interpret data. <ul style="list-style-type: none"> <li>i. Generate measurement data by measuring lengths of several objects to the nearest whole unit, or by making repeated measurements of the same object. Show the measurements by making a line plot, where the horizontal scale is marked off in whole-number units.</li> <li>ii. Draw a picture graph and a bar graph (with single-unit scale) to represent a data set with up to four categories.</li> <li>iii. Solve simple put together, take-apart, and compare problems using information presented in picture and bar graphs.</li> </ul> </li> </ul>	<b>Inquiry Questions:</b> <ul style="list-style-type: none"> <li>1. What are the ways data can be displayed?</li> <li>2. What can data tell you about the people you survey?</li> <li>3. What makes a good survey question?</li> </ul>
	<b>Relevance and Application:</b> <ul style="list-style-type: none"> <li>1. People use data to describe the world and answer questions such as how many classmates are buying lunch today, how much it rained yesterday, or in which month are the most birthdays.</li> </ul>
	<b>Nature of Discipline:</b> <ul style="list-style-type: none"> <li>1. Mathematics can be displayed as symbols.</li> <li>2. Mathematicians make sense of problems and persevere in solving them.</li> <li>3. Mathematicians model with mathematics.</li> <li>4. Mathematicians attend to precision.</li> </ul>

#### **4. Shape, Dimension, and Geometric Relationships**

Geometric sense allows students to comprehend space and shape. Students analyze the characteristics and relationships of shapes and structures, engage in logical reasoning, and use tools and techniques to determine measurement. Students learn that geometry and measurement are useful in representing and solving problems in the real world as well as in mathematics.

##### **Valwood Graduates**

The Valwood graduate competencies are the preschool through twelfth-grade concepts and skills that all graduates will be able to demonstrate.

##### **Valwood Graduate Competencies in the 4. Shape, Dimension, and Geometric Relationships standard are:**

- Understand quantity through estimation, precision, order of magnitude, and comparison. The reasonableness of answers relies on the ability to judge appropriateness, compare, estimate, and analyze error
- Make sound predictions and generalizations based on patterns and relationships that arise from numbers, shapes, symbols, and data
- Apply transformation to numbers, shapes, functional representations, and data
- Make claims about relationships among numbers, shapes, symbols, and data and defend those claims by relying on the properties that are the structure of mathematics
- Use critical thinking to recognize problematic aspects of situations, create mathematical models, and present and defend solutions

<b>Content Area: Mathematics - Second Grade</b>	
<b>Standard: 4. Shape, Dimension, and Geometric Relationships</b>	
<b>Valwood Graduates:</b> Apply transformation to numbers, shapes, functional representations, and data.	
<b>GRADE LEVEL EXPECTATION</b> <b>Concepts and skills students master:</b> 1. Shapes can be described by their attributes and used to represent part/whole relationships.	
<b>Evidence Outcomes</b>	<b>21<sup>st</sup> Century Skills and Readiness Competencies</b>
<b>Students can:</b> <ol style="list-style-type: none"> <li>Recognize and draw shapes having specified attributes, such as a given number of angles or a given number of equal faces.</li> <li>Identify triangles, quadrilaterals, pentagons, hexagons, and cubes.</li> <li>Partition a rectangle into rows and columns of same-size squares and count to find the total number of them.</li> <li>Partition circles and rectangles into two, three, or four equal shares, describe the shares using the words halves, thirds, half of, a third of, etc., and describe the whole as two halves, three thirds, four fourths.</li> <li>Recognize that equal shares of identical wholes need not have the same shape.</li> </ol>	<b>Inquiry Questions:</b> <ol style="list-style-type: none"> <li>How can we describe geometric figures?</li> <li>Is a half always the same size and shape?</li> </ol>
	<b>Relevance and Application:</b> <ol style="list-style-type: none"> <li>Fairness in sharing depends on equal quantities, such as sharing a piece of cake, candy bar, or payment for a chore.</li> <li>Shapes are used to communicate how people view their environment.</li> <li>Geometry provides a system to describe, organize, and represent the world around us.</li> </ol>
	<b>Nature of Discipline:</b> <ol style="list-style-type: none"> <li>Geometers use shapes to describe and understand the world.</li> <li>Mathematicians reason abstractly and quantitatively.</li> <li>Mathematicians model with mathematics.</li> </ol>

<b>Content Area: Mathematics - Second Grade</b>		
<b>Standard: 4. Shape, Dimension, and Geometric Relationships</b>		
<b>Valwood Graduates:</b> Understand quantity through estimation, precision, order of magnitude, and comparison. The reasonableness of answers relies on the ability to judge appropriateness, compare, estimate, and analyze error.		
<b>GRADE LEVEL EXPECTATION</b> <b>Concepts and skills students master:</b> 2. Some attributes of objects are measurable and can be quantified using different tools.		
<b>Evidence Outcomes</b>	<b>21<sup>st</sup> Century Skills and Readiness Competencies</b>	
<b>Students can:</b> <ol style="list-style-type: none"> <li>a. Measure and estimate lengths in standard units. <ol style="list-style-type: none"> <li>i. Measure the length of an object by selecting and using appropriate tools such as rulers, yardsticks, meter sticks, and measuring tapes.</li> <li>ii. Measure the length of an object twice, using length units of different lengths for the two measurements; describe how the two measurements relate to the size of the unit chosen.</li> <li>iii. Estimate lengths using units of inches, feet, centimeters, and meters.</li> <li>iv. Measure to determine how much longer one object is than another, expressing the length difference in terms of a standard-length unit.</li> </ol> </li> <li>b. Relate addition and subtraction to length. <ol style="list-style-type: none"> <li>i. Use addition and subtraction within 100 to solve word problems involving lengths that are given in the same units<sup>1</sup> and equations with a symbol for the unknown number to represent the problem.</li> <li>ii. Represent whole numbers as lengths from 0 on a number line<sup>2</sup> diagram and represent whole-number sums and differences within 100 on a number line diagram.</li> </ol> </li> <li>c. Solve problems time and money. <ol style="list-style-type: none"> <li>i. Tell and write time from analog and digital clocks to the nearest five minutes, using a.m. and p.m.</li> <li>ii. Solve word problems involving dollar bills, quarters, dimes, nickels, and pennies, using \$ and ¢ symbols appropriately</li> </ol> </li> </ol>	<b>Inquiry Questions:</b> <ol style="list-style-type: none"> <li>1. What are the different things we can measure?</li> <li>2. How do we decide which tool to use to measure something?</li> <li>3. What would happen if everyone created and used their own rulers?</li> </ol>	
		<b>Relevance and Application:</b> <ol style="list-style-type: none"> <li>1. Measurement is used to understand and describe the world including sports, construction, and explaining the environment.</li> </ol>
		<b>Nature of Discipline:</b> <ol style="list-style-type: none"> <li>1. Mathematicians use measurable attributes to describe countless objects with only a few words.</li> <li>2. Mathematicians use appropriate tools strategically.</li> <li>3. Mathematicians attend to precision.</li> </ol>

## Second Grade Academic Vocabulary for Students

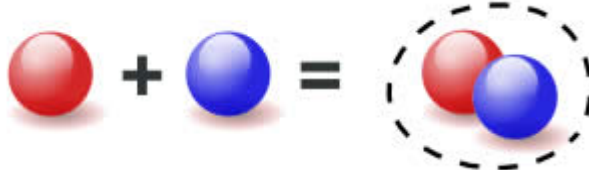

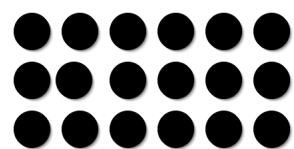

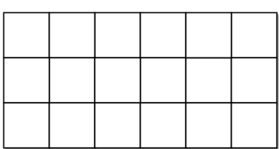

**Standard 1:** add, adding and subtracting through ten, array (columns and rows), arrange, after, before, combine, compare, counting (on, from, up, back), difference, digit, doubles, doubles plus one, efficient, estimate, even number, equation, expanded form, fewer, fractions (halves, thirds, fourths), greater than, landmark numbers, least, less than, most, number line, number sentence, number words to 1,000, odd number, off/on-century/decade counting, order, place value (ones, tens, hundreds), separate, strategy, skip counting, sum, take away, whole number.

**Standard 2:** Expectations for this standard are integrated into the other standards at preschool through third grade.

**Standard 3:** category, compare, data, graph, line plot, t-chart, table, tally marks, unit, picture graph, bar graph

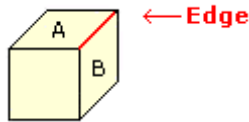

**Standard 4:** angle, array, attribute, centimeters, cube, face, feet/foot, hexagon, inch, length, meters, money (penny, nickel, dime, quarter, dollar), pentagon, polygon, right angle, quadrilateral, quarter, shape, side, solid, triangle, vertex/vertices

## Math Reference Global Glossary for Pre-K – 5 Teachers

<u>Word</u>	<u>Definition</u>
<b>Acute Angle</b>	An angle smaller than 90 degrees.
<b>Add</b>	To bring two or more numbers (or things) together to make a new total.  <div style="text-align: center;">  </div>
<b>Addend</b>	Any number being added.
<b>Adding And Subtracting Through Ten</b>	A non-unitary addition and subtraction strategy that uses ten and its multiples as landmark numbers. (e.g., 8+5 is thought of as 8+2=10 and 10+3=13; 23-7 is thought of as 23-3=20 and 20-4=16).
<b>Additive</b>	Marked by, produced by, or involving addition.
<b>Algorithm</b>	A standardized step-by-step procedure for solving a problem.
<b>Analog Clock</b>	A clock with a face and hands.
<b>Angle</b>	Two rays that share an endpoint.
<b>Area</b>	The measure, in square units, of the inside of a plane figure.
<b>Array</b>	A rectangular arrangement of objects in rows and columns.  <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  <p>dot array (discrete array)</p> </div> <div style="text-align: center;">  <p>area model array</p> </div> </div>
<b>Associative Property</b>	For any rational numbers: $(a + b) + c = a + (b + c)$ and $(a \times b) \times c = a \times (b \times c)$ . The associative property does <b>not</b> apply to subtraction and division.
<b>Attribute</b>	A characteristic or quality.
<b>Bar Graph</b>	A graph that uses the height or length of rectangles to compare data.
<b>Base (Geometric)</b>	The base is the side or face that is perpendicular to the height of the figure. In a solid figure it is the polygon that defines the shape (i.e, the circular base of a cylinder or the triangles of a triangular prism).
<b>Base Ten</b>	A number system in which each place has 10 times the value of the next place to its right.

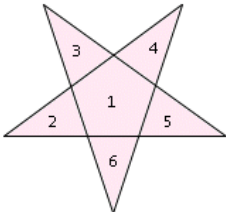

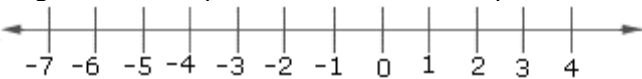

<b>Benchmark Fractions</b>	Fractions used in estimation and mental calculation; commonly halves and whole numbers. (e.g. 0, $\frac{1}{2}$ , 1, $1\frac{1}{2}$ , 2)
<b>Benchmark Numbers</b>	Numbers used in estimation and mental calculation; most commonly multiples of 10, but also including numbers like 25 with which can be readily manipulated.
<b>Braces</b>	A symbol used outside of parentheses [ ] to denote order of operations.
<b>Brackets</b>	A symbol used to denote order of operations used outside of braces. { }
<b>Capacity</b>	The maximum amount that can be contained by an object, usually measured in liquid units. (i.e. tablespoons, cups, gallons. "A vase can hold 3 cups of water.")
<b>Cardinal Number</b>	A number that is used in simple counting and that indicates how many elements there are in a set.
<b>Cardinality</b>	The cardinality of a set is the number of elements or members (numerosity) of a set. The Cardinality Principal is the connection that the last number word of the count indicates the amount of the set.
<b>Categorical Data</b>	Data that is grouped by category or attribute (e.g., What kind of pets do you have? Cats, dogs, rabbits, etc.).
<b>Circle</b>	A 2-dimensional shape made by drawing a curve that is always the same distance from the center.
<b>Clusters</b>	Data that are grouped around a value in a set of values.
<b>Combination</b>	A pair or group of items or events. Placing these items or events in a different order does not create a new combination.
<b>Combine</b>	Put together.
<b>Common Denominator</b>	A denominator that is the same for two or more fractions.
<b>Commutative Property</b>	For any rational numbers: $a + b = b + a$ and $a \times b = b \times a$ . (changing the order of the addends or factors does not affect the sum or product (e.g. $7 + 5 = 5 + 7$ and $7 \times 5 = 5 \times 7$ ))
<b>Compare</b>	Estimate, measure, or note similarities or differences.
<b>Compose</b>	Put together or combine quantities.
<b>Composite Number</b>	A positive whole number that has more than two factors (e.g., The factors of 10 are 1, 2, 5, and 10).
<b>Computation Algorithm</b>	A set of predefined steps applicable to a class of problems that gives the correct result in every case when the steps are carried out correctly.
<b>Computation Strategy</b>	Purposeful manipulations that may be chosen for specific problems, may not have a fixed order, and may be aimed at converting one problem into another.
<b>Cone</b>	A solid (3-dimensional) object that has a circular base and one vertex.
<b>Congruent</b>	Having exactly the same size and shape.
<b>Conjecture</b>	A mathematical hypothesis that has not been proved or disproved.
<b>Constant</b>	Consistent or unchanging. Constant change refers to linear change.
<b>Conversion</b>	To change the form but not the value of a particular number or quantity.
<b>Coordinates</b>	An ordered pair of numbers that identify a point on the coordinate plane. (coordinate pair)
<b>Count</b>	To tell or name one by one or by groups, for the purpose of determining the whole number of units in a collection; to number or enumerate. (see also cardinality, number word sequence, order irrelevance, and one to one correspondence)
<b>Counting Back</b>	Counting back from or to a number. Example of counting back from: $11 - 3$ is solved by counting back from 11: "10, 9, 8." Example of counting back to: $11 - \underline{\quad} = 8$ is solved by counting back to 8 and keeping track of three counts.

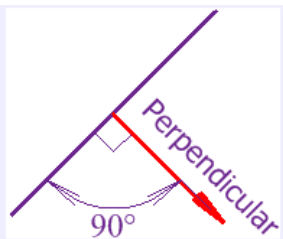

<b>Counting On</b>	Counting up from or to a number. Example of counting up from: $7+5$ is solved by counting up 5 from 7: 8, 9, 10, 11, 12. Example of counting up to: $7 + \underline{\quad} = 12$ is solved by counting from 7 up to 12 and keeping track of 5 counts.
<b>Cube</b>	A box-shaped solid object that has six identical square faces.
<b>Cubic Unit</b>	A unit such as a cubic meter used to measure volume or capacity.
<b>Cylinder</b>	A solid object with two identical flat ends that are circular and one curved face. It has the same cross-section from one end to the other.
<b>Data</b>	Information, usually numerical information.
<b>Decimal Fraction</b>	A fraction or decimal number (as $0.25 = \frac{25}{100}$ or $0.025 = \frac{25}{1000}$ ) or mixed number (as $3.025 = 3 \frac{25}{1000}$ ) in which the denominator is a power of 10 usually expressed by the use of a decimal point.
<b>Decimal Number</b>	A number that uses a decimal point to indicate parts of a whole (e.g., 3.25).
<b>Decompose</b>	Breaking quantities into useful chunks.
<b>Degrees</b>	A unit of measurement as of an angle or temperature.
<b>Denominator</b>	The number below or to the right of the line in a fraction, indicating the number of equal parts into which one whole is divided. For example, in the fraction $\frac{2}{7}$ , 7 is the denominator.
<b>Diagram</b>	A visual representation.
<b>Difference</b>	The amount that remains after one quantity is subtracted from another.
<b>Digit</b>	Any one of the ten symbols: 0, 1, 2, 3, 4, 5, 6, 7, 8, 9.
<b>Dimension</b>	The property of an object that is measurable in space. A line has one dimension because it can only be measured once. A rectangle has two dimensions that can be measured.
<b>Directional And Positional</b>	Words that describe a position or place of an object or number in space
<b>Distributive Property</b>	$a(b + c) = ab + ac$ and $a(b - c) = ab - ac$ , where a, b, and c are any real numbers. The distributive property is used to multiply multi-digit numbers $3 \times 34 = (3 \times 30) + (3 \times 4)$
<b>Dividend</b>	In a division problem, the number of items you are separating - "the whole" (see also partitive and quotative division)
<b>Division</b>	The action of separating something into parts, or the process of being separated.
<b>Divisor</b>	The number by which a dividend is divided
<b>Doubles Plus One</b>	An addition strategy that utilizes knowledge of doubles facts to add two numbers that are one away from each other (e.g., $5 + 6$ can be found by knowing that $5 + 5 = 10$ and one more would be 11.)
<b>Edge</b>	The segment on a three-dimensional geometric figure that is formed by the intersection of two faces. 
<b>Elements (Of A Pattern)</b>	The individual items in a set.
<b>Equal</b>	Exactly the same amount or value.
<b>Equality</b>	Represented by an equal sign. In an equation, the equal sign represents a relationship between two expressions that have the same value
<b>Equal Partitions/Part</b>	Pieces of an object or set that are equivalent in amount.
<b>Equivalence</b>	Capable of being put into a one-to-one relationship. Having virtually identical or corresponding parts.
<b>Equivalent</b>	Equal partitions/parts, equal to each other, the same amount.

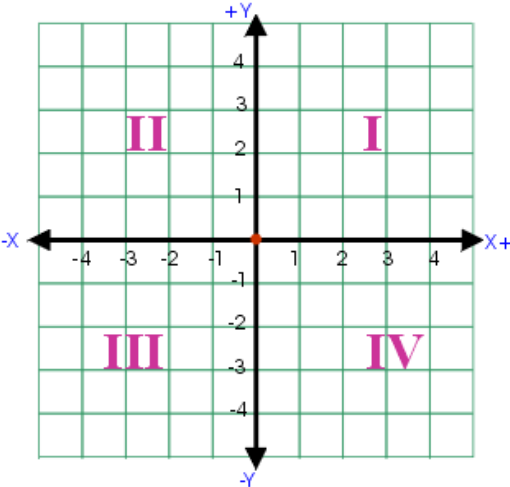

<b>Equivalent Fractions</b>	Fractions that represent the same amount but have different numerators and denominators. For example $\frac{1}{2} = \frac{2}{4} = \frac{3}{6} = \frac{4}{8} = \frac{5}{10}$
<b>Estimate</b>	(noun) A number close to an exact amount. An estimate tells about how much or about how many. (verb) To find a number close to an exact amount
<b>Even Number</b>	A whole number that has 2 as a factor. All even numbers are divisible by two and have 0, 2, 4, 6, or 8 in the ones place.
<b>Expanded Form</b>	A way to write numbers that shows the place value of each digit (e.g., $789 = 700 + 80 + 9$ ).
<b>Exponents</b>	A number used to tell how many times a number or variable is used as a factor. (i.e., $5^3$ indicates that 5 is a factor 3 times, that is, $5 \times 5 \times 5$ . The value of $5^3$ is 125. 5 is the base number and 3 is the exponent.)
<b>Expression</b>	A group of characters or symbols representing a quantity (example: $5 + 6 = 11$ , $7 \times 8$ , $3x + 6$ ).
<b>Face</b>	A face is a flat surface of a three-dimensional figure. 
<b>Factors</b>	Numbers that are multiplied together to form a product (e.g., $6 \times 7 = 42$ , 6 and 7 are factors).
<b>Fluency</b>	Efficiency, accuracy, and flexibility in solving computation problems.
<b>Fraction</b>	A number that describes a part of a whole or group, usually in the form $a/b$ where "a" is any real number and "b" is any real number $> 0$ .
<b>Frequency Table</b>	A table that depicts the number of times that something occurs in an interval or set of data.
<b>Function Table</b>	A table that matches each input value with an output value. The output values are determined by the function. Couldn't paste diagrams
<b>Generalizable</b>	The ability to extend a number of results to form a rule. For example $5 + 3 = 3 + 5$ and $1.5 + 2.7 = 2.7 + 1.5$ can be generalized to $a + b = b + a$ .
<b>Graph</b>	A drawing that shows a relationship between sets of data.
<b>Greater Than</b>	Larger. The special symbol used to show one number is larger than another is $>$ . $a > b$ indicates that a is larger than b.
<b>Height</b>	The vertical distance from top to bottom.
<b>Hexagon</b>	A polygon with six sides.
<b>Horizontal</b>	Parallel to the horizon.
<b>Identify (Numeral Identification)</b>	To give the name of a written numeral or other symbol in isolation (e.g., When presented a card with the numeral 563, the child says "five hundred sixty-three"). (compare to recognize)
<b>Identity Property</b>	Of Addition: for any number $n$ ; $n + 0 = n$ Of Subtraction: for any number $n$ ; $n - 0 = n$ Of Multiplication: for any number $n$ , $n \times 1 = n$ Of Division: for any number $n$ , $n / 1 = n$
<b>Improper Fraction</b>	A fraction with a value greater than 1 that is not written as a mixed number.
<b>In And Out Tables (Function Tables)</b>	A table that matches each input value with an output value. The output values are determined by the function.
<b>Integer</b>	Any positive or negative whole number and the number zero.
<b>Interval Of Time</b>	A definite length of time marked off by two instants.
<b>Inverse Operation</b>	An operation that undoes another operation (e.g. addition and subtraction are inverse operations).
<b>Landmark Number</b>	Numbers that are familiar landing places that make for simple calculations and to which other numbers can be related (e.g., 10, 50, and 100 are commonly used landmarks).

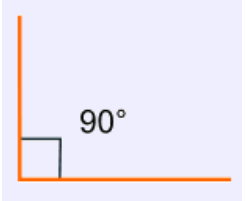

<b>Length</b>	The distance along a line or figure from one point to another. One dimension of a two-or three-dimensional figure.
<b>Less Than</b>	Smaller. The special symbol used to show one number is smaller than another is $<$ . $a < b$ indicates that a is smaller than b.
<b>Linear Measurement</b>	A unit or system of units for the measurement of length.
<b>Line</b>	An infinite set of points forming a straight path in 2 directions.
<b>Line Plot</b>	A graph showing frequency of data on a number line.
<b>Line Segment</b>	A part of a line defined by 2 end points.
<b>Line Of Symmetry</b>	A line that divides a figure into two halves that are mirror images of each other.
<b>Mass</b>	Quantity of matter in an object. Usually measured in weight.
<b>Mean</b>	The average of a set of data. It is the number found by dividing the sum of the numbers in a set of data by the number of addends. (calculation of the mean is not a expectation of this elementary curriculum)
<b>Measure</b>	To find the quantity, length, area, volume, capacity, weight, duration, etc. of something.
<b>Measurement Words</b>	Words used to describe differences in objects being measured (i.e. heavier/lighter, shorter/longer).
<b>Median</b>	In a set of data, the number in the middle when the data is organized from least to greatest. When there are an even number of data, the median is the mean of the two middle values. (e.g. For the set of numbers 2, 4, 6, 8, 10, 12 the median is 7)
<b>Mental Computation</b>	Computing an exact answer without using paper and pencil or other physical aids.
<b>Metric System</b>	An international system of measurement based on tens. The basic units of measure are meter, liter, gram, degrees Celsius.
<b>Minuend</b>	The number you subtract from (e.g., $8-3=5$ ; 8 is the minuend).
<b>Mixed Number</b>	A number consisting of an integer and a fraction.
<b>Mode</b>	The number or item that appears most often in a set of data. There may be one, more than one, or no mode. (when there are 2 modes we say that the data set is bimodal. When there are more than 2 modes we say that there is no mode.)
<b>More Than</b>	Greater than (informal)
<b>Multiple</b>	The product of the number and any whole number (e.g., The multiples of 4 are 0, 4, 8, 12, 16...).
<b>Multiplicative Comparison</b>	Interpret that $35 = 5 \times 7$ as a statement that 35 is 5 times as many as 7 and 7 times as many as 5.
<b>Net</b>	A two-dimensional shape that can be folded into a three-dimensional figure. The following is the net of a pentagonal pyramid. 
<b>Non-Standard Units</b>	Units other than customary or metric units used for measurement (e.g. a paper clip might be used as a non-standard unit of length).
<b>Number Line</b>	A diagram that represents numbers as points on a line, marked at intervals. 
<b>Number Sentence</b>	An equation or inequality with numbers (e.g., $6 + 3 = 9$ or $8 + 1 < 12$ ).

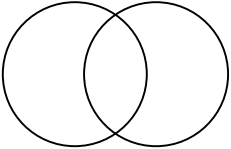

<b>Number Sense</b>	A person's ability to use and understand numbers: knowing relative values; how to use numbers to make judgments; how to use numbers in flexible ways when adding, subtracting, multiplying or dividing; how to develop useful strategies when counting, measuring, or estimating. This would include number meanings, number relationships, number size, and the relative effect of operations on numbers.
<b>Number Word Sequence</b>	A regular sequence of number words, typically, but not necessarily, by ones. (both forward and backward). An element of counting.
<b>Numeral</b>	A symbol used to represent a number.
<b>Numerator</b>	A number written above or to the left of the line in a common fraction to indicate the number of parts of the whole. For example, 2 is the numerator in the fraction $\frac{2}{7}$ .
<b>Numeric Expression</b>	A mathematical combination of numbers, variables, and operations. (e.g., a box with an amount of pencils, $x$ , with 3 missing is $x-3$ ).
<b>Numerical Data</b>	Data expressed in or involving numbers.
<b>Obtuse Angle</b>	An angle greater than 90 and less than 180 degrees.
<b>Odd Number</b>	A whole number that is not divisible by 2. All odd numbers have 1, 3, 5, 7, or 9 in the ones place.
<b>Open Number Sentence</b>	A number sentence in which one or more numerical values is missing (e.g., $\_\_ + 6 = 13$ ).
<b>Off-Century Counting</b>	Counting forward or backward by 100, starting at any number that is not a multiple of one hundred (e.g., 125, 225, 325...).
<b>Off-Decade Counting</b>	Counting forward or backward by 10, starting at any number that is not a multiple of 10 (e.g. 54, 44, 34 . . .).
<b>On-Century Counting</b>	Counting forward or backward by 100 starting at any multiple of 100. (e.g. 100, 200, 300 ...)
<b>On-Decade Counting</b>	Counting forward or backward by 10, starting at any multiple of ten (e.g. 10, 20. 30 . . .).
<b>One-To-One Correspondence</b>	In counting, assigning one counting number for each object counted in order to determine how many in a set.
<b>Open Number Sentence</b>	A number sentence in which one or more numerical values is missing (e.g., $\_\_ + 6 = 13$ ).
<b>Operation</b>	A mathematical process; addition, subtraction, multiplication, division, and raising a number to a power are some mathematical operations.
<b>Order</b>	The arrangement of people or things in relation to each other according to a particular sequence, pattern or method.
<b>Order Of Operations</b>	The customary order in which operations must be performed in order to arrive at the intended result. They are, in order, brackets, braces, parentheses, multiplication and division, addition and subtraction. Calculations always move from left to right when no other indication is made, for instance $8 - 3 + 5 = (8-3)+5$ .
<b>Order Irrelevance (In Counting)</b>	The understanding that the number of objects in a set is unchanged regardless of the order in which the members of the set are counted. (an element of counting)
<b>Ordered Pair</b>	A pair of numbers used to name a location on coordinate plane ( $x,y$ ); the first number is the horizontal distance from the origin, the second is the vertical distance from the origin. (see also coordinates)
<b>Ordinal Number</b>	Indicates the relative position of an object in an ordered set (e.g., 1st, 2nd, 5th ).
<b>Origin</b>	The intersection of the $x$ and $y$ axes in a coordinate plane. Its coordinates are $(0,0)$ .
<b>Outcome</b>	A possible result of a random process (e.g., Heads and tails are the two possible outcomes of flipping a coin.)

<b>Outlier</b>	An item of data that is significantly greater or less than all the other items of data.												
<b>Oval</b>	Any curve that looks like an egg or an ellipse.												
<b>Parallel Lines</b>	Lines that are always the same distance apart; never meeting.												
<b>Parallelogram</b>	A polygon with opposite sides that are parallel and equal in length, and opposite angles that are equal. NOTE: squares, rectangles and rhombuses are all parallelograms.												
<b>Partition</b>	Breaking quantities into useful chunks in order to solve problems.												
<b>Partitive Division</b>	A partitive division problem is one where you know the total number of groups, and you are trying to find the number of items in each group. If you have 30 popsicles and want to divide them equally among 5 friends you are figuring out how many popsicles each friend would get. (see also quotative division)												
<b>Part-Part-Whole</b>	See Elementary Math Curriculum, Table A.												
<b>Pattern</b>	An ordered set of numbers, shapes or other mathematical objects, arranged according to a rule.												
<b>Pentagon</b>	A geometric figure with five sides.												
<b>Perimeter</b>	The sum of the measures of the lines forming a polygon.												
<b>Perpendicular</b>	When two lines intersect to make a right angle. 												
<b>Perpendicular Pictograph</b>	A graph using pictures or symbols to show data.												
<b>Pictograph</b>	A graph using pictures or symbols to show data. <table border="1" data-bbox="505 1159 902 1398"> <thead> <tr> <th colspan="2">HOW WE GET TO SCHOOL</th> </tr> </thead> <tbody> <tr> <td>Walk</td> <td></td> </tr> <tr> <td>Ride a Bike</td> <td></td> </tr> <tr> <td>Ride the Bus</td> <td></td> </tr> <tr> <td>Ride in a Car</td> <td></td> </tr> <tr> <td colspan="2">Key: Each  = 10 students.</td> </tr> </tbody> </table>	HOW WE GET TO SCHOOL		Walk		Ride a Bike		Ride the Bus		Ride in a Car		Key: Each  = 10 students.	
HOW WE GET TO SCHOOL													
Walk													
Ride a Bike													
Ride the Bus													
Ride in a Car													
Key: Each  = 10 students.													
<b>Pictorial Representation</b>	Using a picture to model a solution strategy or mathematical idea.												
<b>Place Value</b>	The value of the place of a digit of a number (e.g., In the number 7324, 4 is $4 \times 1$ , 2 is $2 \times 10$ , 3 is $3 \times 100$ , and 7 is $7 \times 1,000$ ) The understanding that each place to the left of the next is valued at $10 \times$ the place to then right, and conversely that those to the right are $1/10$ of those to the left. Place value understandings are a key element of number sense.												
<b>Plane Figure</b>	A two-dimensional shape.												
<b>Polygon</b>	A closed figure formed by three or more line segments that do not cross.												
<b>Powers Of Ten</b>	Any number that can be expressed as repeated multiplication of 10 (e.g., 10, 100, 1000)												
<b>Prime Number</b>	A whole number that has exactly two different positive factors, itself and 1 (e.g., 7 is a prime number because its only factors are 7 and 1). 1 is not a prime number because it does not have 2 factors.												

<b>Prism</b>	A polyhedron with two polygonal faces lying in parallel planes and with the other faces parallelograms
<b>Problem-Solving Situations</b>	Contexts in which problems are presented that apply mathematics to practical situations in the real world, or problems that arise from the investigation of mathematical ideas
<b>Product</b>	The result of multiplication
<b>Proper Fraction</b>	A fraction less than one.
<b>Property (Geometry)</b>	A defining attribute of a geometric figure. Parallel opposite sides is a property of rectangles.
<b>Protractor</b>	A measurement tool used to measure an angle.
<b>Quadrant One</b>	<p>The x and y axes of the coordinate plane divide the plane into four regions called quadrants. These regions are labeled counter-clockwise, starting from the top-right.</p> 
<b>Quadrilateral</b>	A polygon with four sides.
<b>Qualitative</b>	Of, or relating to descriptions based on some quality rather than quantity. (e.g. "Today is hotter than yesterday." "It is very likely to rain today")
<b>Quantitative</b>	Data of, relating to, or expressible in numeric terms. (e.g. "It is 98° outside." "There is an 85% chance of rain today")
<b>Quantity</b>	How much there is of something.
<b>Quotative Division</b>	Quotative division is when you know the total number of each set and you are determining how many sets you can make. If you have 30 students and you need to make groups of 5, how many groups will you make? (see also partitive division)
<b>Quotient</b>	The result of division.
<b>Range</b>	The difference between the least and greatest values in a set of data.
<b>Rational Number</b>	A number that can be expressed in the form $a/b$ , where $a$ and $b$ are integers and $b \neq 0$ , for example, $3/4$ , $2/1$ , or $11/3$ . Every integer is a rational number, since it can be expressed in the form $a/b$ , for example, $5 = 5/1$ . Rational numbers may be expressed as fractional or decimal numbers, for example, $3/4$ or $.75$ . Finite decimals, repeating decimals, and mixed numbers all represent rational numbers.
<b>Ray</b>	A part of a line that has one endpoint and extends indefinitely in one direction.

<b>Real-World Problems (Also Called Real-World Experiences)</b>	Quantitative problems that arise from a wide variety of human experience which may take into consideration contributions from various cultures (for example, Mayan or American pioneers), problems from abstract mathematics, and applications to various careers (for example, making change or calculating the sale price of an item). These may also be called real-world experiences, story problems, story contexts and word problems.
<b>Rectangle</b>	A quadrilateral with two pairs of congruent, parallel sides and four right angles.
<b>Rectilinear Figure</b>	Consisting of, bounded by, or formed by a straight line or lines. (rectilinear means having straight lines)
<b>Regular Polygon</b>	A polygon with all sides the same length and all angles the same measure.
<b>Remainder</b>	What is left over when the dividend is not a multiple of the divisor.
<b>Repeating Pattern</b>	A pattern of items, shapes or numbers, that repeats itself.
<b>Rhombus</b>	A parallelogram with all four sides equal in length.
<b>Right Angle</b>	An angle with a measure of $90^\circ$ ; a square corner.  <p>The diagram shows a right angle formed by two perpendicular orange line segments meeting at a vertex. A small square symbol is drawn at the vertex to indicate the right angle, and the text "90°" is placed next to it.</p>
<b>Round</b>	To express a number in a simplified form by finding the nearest whole number, ten, hundred, thousand, etc. (e.g., 537 to the nearest hundred rounds to 500, to the nearest 10 rounds to 540).
<b>Rule</b>	A principle to which an action conforms or is required to conform. In mathematical relationships rules are often described or defined by operations. (e.g. add 6) (see also in and out tables)
<b>Sample Space</b>	The set of all possible outcomes of an experiment.
<b>Scale</b>	The ratio between the actual size of an object and a proportional representation. A system of marks at fixed intervals used in measurement or graphing.
<b>Separate</b>	See Table A below
<b>Shape (Plane)</b>	A two-dimensional figure having length and width.
<b>Shape (Solid)</b>	A three-dimensional figure having length, width and height. (examples include, spheres, cubes, pyramids and cylinders).
<b>Side</b>	Any one of the line segments that make up a polygon.
<b>Skip Counting</b>	When you count forwards or backwards by a number other than 1.
<b>Solid</b>	A geometric figure with three dimensions, length, width and height.
<b>Sort</b>	To arrange or group in a special way (such as by size, type, or alphabetically).
<b>Sphere</b>	A 3-dimensional object shaped like a ball. Every point on the surface is the same distance from the center.
<b>Square</b>	A parallelogram with four congruent sides and four right angles.
<b>Square Number</b>	A number that is the result of multiplying an integer by itself.
<b>Standard Form</b>	A number written with one digit for each place value (e.g., The standard form for the number two hundred six is 206).
<b>Standard Units</b>	Units from the customary system or metric system used for measurement (e.g. inch and centimeter are standard units of length).

<b>Standards For Mathematical Practice</b>	The working practices of mathematicians. In the Common Core State Standards they are: <ol style="list-style-type: none"> <li>1. Make sense of problems and persevere in solving them.</li> <li>2. Reason abstractly and quantitatively.</li> <li>3. Construct viable arguments and critique the reasoning of others.</li> <li>4. Model with mathematics.</li> <li>5. Use appropriate tools strategically.</li> <li>6. Attend to precision.</li> <li>7. Look for and make use of structure.</li> <li>8. Look for and express regularity in repeated reasoning.</li> </ol>
<b>Stress Counting</b>	Counting by ones, emphasizing a multiplicative pattern (1, 2, <b>3</b> , 4, 5, <b>6</b> ). (related to and often preliminary to skip counting)
<b>Subitize</b>	Instantly quantifying a small collection without counting.
<b>Subtrahend</b>	In subtraction, the number being subtracted (e.g., In $8 - 5 = 3$ , 5 is the subtrahend).
<b>Sum</b>	The result of addition.
<b>Symmetry</b>	The property of exact balance in a figure; having the same size and shape across a dividing line (line/mirror symmetry) or around a point (rotational).
<b>Symbolic Notation</b>	A mathematical idea represented with symbols.
<b>Table</b>	An organized way to list data. Tables usually have rows and columns of data.
<b>Tally Marks</b>	Marks used to keep track of things being counted, usually organized in groups of five. <div style="text-align: center;">  </div>
<b>Take Away</b>	Subtract – to take one number away from another.
<b>T-Chart</b>	A chart showing the relationship between two variables.
<b>Three-Dimensional Transformation</b>	An object that has height, width and depth.
<b>Slides (Translations)</b>	A rule for moving every point in a plane figure to a new location. Three types of transformations are
<b>Flips (Reflections)</b>	A transformation that moves a figure a given distance in a given direction. A transformation that creates a mirror image of a figure on the opposite side of a line.
<b>Turns (Rotations)</b>	A transformation in which a figure is turned a given angle and direction around a point.
<b>Trapezoid</b>	A quadrilateral with one pair of parallel sides.
<b>Tree Diagram</b>	An organized way of listing all the possible outcomes of an experiment.
<b>Triangle</b>	A 3-sided polygon.
<b>Two-Dimensional</b>	A shape that only has two dimensions (such as width and height) and no thickness.
<b>Unit Fraction</b>	A rational number written as a fraction where the numerator is one and the denominator is a positive integer. For example, $\frac{1}{4}$ , $\frac{1}{2}$ , $\frac{1}{3}$ , $\frac{1}{8}$
<b>Unit Of Measurement</b>	A quantity used as a standard of measurement. For example units of time are second, minute, hour, day, week, month, year and decade.
<b>Unknown</b>	A value that is missing in a problem.
<b>Variable</b>	A value represented by a symbol, most often a letter, in an expression, equation, or formula. (e.g. in the expression $y+3$ , $y$ is the variable).

<b>Venn Diagram</b>	A drawing that uses circles to show relationships among sets.  
<b>Vertex</b>	The point where two or more straight lines meet.
<b>Vertices</b>	Plural of vertex.
<b>Vertical</b>	Upright; perpendicular to the horizon.
<b>Volume</b>	A measure of the amount of space occupied by a three-dimensional figure, generally expressed in cubic units.
<b>Weight</b>	The measure of the heaviness of an object.
<b>Whole Numbers</b>	The set of natural numbers plus the number zero (0, 1, 2, 3 . . . ).
<b>Width</b>	The distance from side to side.

**Table A**  
**Types of Addition and Subtraction Problems**

Problem Type	(Result Unknown)	(Change Unknown)	(Start Unknown)
Join	Connie had 5 marbles. Juan gave her 8 more marbles. How many marbles does Connie have altogether?	Connie has 5 marbles. How many more marbles does she need to have 13 marbles altogether?	Connie had some marbles. Juan gave her 5 more marbles. Now she has 13 marbles. How many marbles did Connie have to start with?
Separate	Connie had 13 marbles. She gave 5 to Juan. How many marbles does Connie have left?	Connie had 13 marbles. She gave some to Juan. Now she has 5 marbles left. How many marbles did Connie give to Juan?	Connie had some marbles. She gave 5 to Juan. Now she has 8 marbles left. How many marbles did Connie have to start with?
Part-Part-Whole	(Whole Unknown)		(Part Unknown)
	Connie has 5 red marbles and 8 blue marbles. How many marbles does she have?	Connie has 13 marbles. 5 are red and the rest blue. How many blue marbles does Connie have?	
Compare	(Difference Unknown)	(Compare Quantity Unknown)	(Referent Unknown)
	Connie has 13 marbles. Juan has 5 marbles. How many more marbles does Connie have than Juan?	Juan has 5 marbles. Connie has 8 more than Juan. How many marbles does Connie have?	Connie has 13 marbles. She has 5 more marbles than Juan. How many marbles does Juan have?
